

## CEWELD SP 95/5 (NiAl)

ТҮРЕ	SP 95/5 is a Nickel-Aluminum based alloy for use as a bonding layer with the thermal spray process						
APPLICATIONS	New coatings on machine parts and shafts to increase life, rebuilding wornout parts etc. Layer thickness: approximately 0.1- 0.15 mm.						
PROPERTIES	This alloy offers the highest bonding properties available for both the Flame spray process as the Arc Spray process. The wire has a high polished and clean surface to assure the best feeding and thermal spray properties. Sprayed layers of this material are-resistant to variation in high temperatures and are used as a buffer layer for all other spraying alloys. Hardness, coating macro: approximately HRc 22. Maximum working temperature: approximately 850 °C						
CLASSIFICATION	EN ISO 14919: 6.5						
SUITABLE FOR	Shafts, Clutches, Gliding surfaces, Valves, Bond coatings etc.						
APPROVALS							
WELDING POSITIONS	PC						
TYPICAL CHEMICAL ANALYSIS OF THE FILLER METAL (%)	Si	Mn	Ti	Fe		Al	Ni
	0.2	0.2	0.2	0.1		5.2	Rem.
MECHANICAL PROPERTIES	Heat Treatment		R <sub>P0,2</sub> (MPa)	Rm (MPa)	A5 (%)	Hardness	
	As Welded					75 HB	
REDRYING	Not required						
GAS ACC. EN ISO 14175	None
