

## CEWELD 410 Tig

TYPE Stainless steel filler with 13% chromium for overlay welding and joining.

APPLICATIONS Overlay of carbon and low-alloy steels for resistance to corrosion, erosion, or abrasion. CEWELD®

410 Tig has higher hardness and is used in valve seats to obtain better galling resistance. Normally

to obtain adequate ductility, preheat and post-weld heat-treatment are required.

PROPERTIES CEWELD® 410 Tig is a martensitic stainless steel that is heat-treatable. It has a nominal weld metal

composition of 12% Chromium. These weld deposits are air-hardenable that can normally be heat-

treated after welding.

CLASSIFICATION AWS A 5.9: ER410

EN ISO 14700: S Fe7
