

TYPE Basic, Cr and Mo-alloyed electrode for heat resistant steels T/P91 and T/P92

TOEPASSINGEN Headers, main steam piping and turbine casings, in fossil fuelled power generating plants. Oil

refineries and coal liquefaction and gasification plants. Preheat and Interpas temperature 200°C -

300°C.

EIGENSCHAPPEN 9015-B9 is designed to weld equivalent 'type T91' T92 CrMo steels modified with small additions of

vanadium and tungsten to give improved long term creep properties. These consumables are specifically intended for high integrity structural service at elevated temperature so the minor alloy additions responsible for its creep strength are kept above the minimum considered necessary to ensure satisfactory performance. In this case, weldments will be weakest in the softened

 $(intercritical) \ HAZ \ region \ of \ parent \ material, \ as \ indicated \ by \ so-called \ 'type \ IV' \ failure \ in \ transverse$

weld creep tests.
